Lifting Columns

Telemag TFG lifting columns offer compact, fast, and powerful solutions to deliver push or pull force for loads up to 2,500 N. Ideally suited for a wide range of medical applications, their rigid aluminum profiles and precision glide pads enable the columns to lift off-center loads without deflection. Unique and efficient gear technology contributes to high push force capabilities and low noise levels. The lifting columns incorporate a DC linear actuator (24, 120, or 230 V) to extend or retract three telescopic aluminum profiles. The columns run quietly and with minimal vibration at a maximum speed of 19 mm/sec.
