

Powered Equipment Cart

The NB400 powered equipment cart was developed to provide true mobility within a facility. With a computer on board, it is designed to ensure access to the latest information and to provide the means to operate equipment anywhere in a facility even in the most remote corners. This powered/wireless cart can be configured to suit the user's exact application requirements. This may include a computer or laptop, a barcode scanner, a thermal printer, and more. The NB400 offers seamless power with a rechargeable 40, 75, or 100 amp hour sealed battery. The 8+ hours of use and quick recharging minimize the time the cart is out of service and broadens its range of applications.
