

Neuroleads

Neuroleads with disc electrodes are designed for non-invasive cutaneous neurological assessment with active and reference electromyography, electroencephalograph, and evoked potential monitoring and recording equipment. The tangle-resistant, high conduction wires have multi-stranded center conductors for maximum flexibility and low signal loss. Neuroleads will be available in a selection of jacketing materials, ten color options, packaged in standard sets or single bulk packs, and in lengths of 48, 60, 72, 96, and 120 in.
