

## Ball Bushings

This extensive line of linear ball bushings is offered for most factory automation applications. By offering 259 types of linear ball bushings, customers are able to choose from a broad assortment of sizes and styles, so their application needs can be quickly met. With varying shape, length, material, and surface finish combinations, the ball bushings feature a range of available types. Choose from either 52100 bearing steel or 440C stainless steel materials, with electroless nickel plating offered as an optional surface treatment for the 52100 bearing steel. Furthermore, compatible spacers, stopper plates, and mounting housings are offered to complement this line.
