

Brushless Motors

Weighing just 33 grams, these brushless motors provide 50 watts of power at up to 60,000 RPM in a compact 16 mm housing, with incredibly quiet 39 dB operation. Additionally, a new internal design achieves a 10% reduction in length and as much as a 400% reduction in vibration, with a 10% increase in power compared with previous brushless motors from the company. They are an ideal motion control solution for compact respiratory support equipment.
