

Feedthrough Filters and Capacitors

The Corcom brand feedthrough filters and capacitors are suitable for AC applications ranging from 10 to 300 amps, and DC applications ranging from 10 to 200 amps. Feedthrough filters offer high reliability and performance in high frequency applications found in servers, base stations, routers, power supplies, telecom racks, and other installations that have high-power microwave lines. The FFA series feedthrough filters are designed to meet EN133200 class Y2 requirements and are RoHS compliant. FFA series feedthrough filters are rated for 250 VAC and comply with 5,000 V pulse testing.
