Tape

High quality 3M VHB bonding and sealing tape is designed to permanently bond and seal a variety of metals, plastics, and other surfaces during medical device assembly, resulting in increased productivity, exceptional strength, extensive durability, and improved product appearance. The tapes contain a viscoelasticity that absorbs shock and flexing, offering long-term solutions against impact, vibration, gravity, and thermal expansion/contraction. These durable tapes are able to bond and seal metal and most plastics, including hard-to-bond polycarbonate.
