Connector (4233)

Ideal for medical applications, the multi axial rotational connector (MARC) is designed to mate while traveling through an arc with a 3-inch minimum radius. The MARC is rated to 30 Amps while combining power, signal, and ground circuitry into one package. Featuring eight Powerpole circuits integrated into a blind mate housing, the two row horizontally oriented connector uses flat wiping contacts and can be configured with eight standard length contacts or six standard length and two pre-mate ground contacts.
