

## Miniature Pressure Sensor

The P6000 pressure transducer product line now includes very low-pressure ranges and is also available in surface mount configurations. This line of sensors can be used for an extensive variety of applications including, HVAC, oxygen generators, respirators, ventilators, CPAP equipment, as well as pneumatic controls, specialty surfaces and mattresses, and laboratory instrumentation. The P6000 family of sensors operates on a linear, amplified output proportional to pressure of 0.5 to 4.5 VDC. They are temperature compensated and have excellent EMI/RFI and ESD protection.
