

Fuse Holders

This high reliability and compact PC auto blade fuse holder is uniquely designed to accept standard and low profile "mini-size fuses" and hold them in place after multiple insertions. Thru-hole mountable to assure secure positioning during wave soldering, the holder also features fully insulated clips to protect fuses and reduce assembly time. Insulators are made of UL 94 V-O Nylon while 0.016 tin-nickel-plated brass is used for contacts to withstand shock and vibration. Voltage rating is 500 VAC and 20 Amps current.
