

Complex Plastic Cutting

Complex cutting, shaping, and contouring of plastic materials in rounds, tubing, flat material, fabric, laminates, and extrusions is offered. Materials include silicone, PTFE, ETFE, polyurethane, Pebax, Pevax, Mylar, Kapton, and polyester fabric, and the company will test processability of other materials upon request. The company's processes allow for virtually any shape to be drilled through to the center (one wall) or through both walls of the tubular part.
