

## Contour Analysis Software

FineFit analysis software is offered for accurately comparing parts with CAD models. Designed for use with FineScan Inspection Systems, FineFit compares measurement point data to evaluate form errors of manufactured parts with complex geometric shapes. FineFit's fast 2D best-fit capabilities combined with its graphical user interface and powerful graphics engine allow users to manipulate and visualize a CAD model, measurement data, and analysis results. All this makes FineFit ideal for first article inspection.
