

## Optical Wipe

This white optical wipe is a non-woven material that features the softness and absorbency of cloth, but is tear-resistant and totally lint-free. Ideally suited for cleaning and polishing precision optical substrates, this wipe feels like cloth and will not scratch. Supplied ready-to-use as handy 12 x 20 in. sheets, the wipe is packaged 750 pieces per carton. For packaging and shipping optics, the 805 Blue Fiber Reinforced Optical Wipe is available which is also lint-free and scratch-resistant, but is stiff to stay folded.
