

Conformal Coating Platform

With up to 30% faster throughput, a vision system, closed-loop process controls, traceability, and advanced integrated software, the Select Coat SL-940E provides high quality and increased productivity in a high-speed, high-accuracy coating system. With this system, advanced monitoring makes it easier to keep the coating process in control. Fluid and air pressures are set and monitored through software-controlled electronic regulators, allowing traceability for these critical parameters. Data logging and automatic adjustments of other parameters such as fan widths, fluid temperatures, and flow rates further ensure the quality of the coating process.
