

## Image-Based ID Reader

The power and capability of the high-performance DataMan 100 family of image-based ID readers has been expanded. New lens accessories provide magnification flexibility to optimize reading performance. A super high density lens kit allows flat-panel-display manufacturers and printed circuit board assemblers to read tiny codes with cell sizes as small as 2.0 mil, and the new C-mount lens adapter further extends the range of lenses that can be used.
