

Automatic Package Wrappers

Bergami's series of automatic package wrappers are offered as part of a complete packaging line. The wrappers are available in a number of models that offer choices in wrapping speed, machine footprint, and package size to meet a variety of types of applications. The machines meet cGMP requirements and offer a balcony design for easy access, cleaning, and maintenance. All models offer very quick changeover (less than 7 minutes for most models). The wrappers are designed to handle heat-sealable films of PP, PVC, PE, cellophane, etc. Many models will also accommodate non heat-sealable materials such as Kraft paper.
