

Cable Tie-Mounts and Hooks

Self-clinching cable tie-mounts and hooks provide secure attachment points for mounting wires and cables to electronic chassis or enclosures. All TY-D hardware can install quickly and permanently without screws or adhesives. Their locations and positions can be set during the design process to provide optimal layout for wires and cables during final assembly. The family of TY-D hardware includes Type TD cable tie-mounts and patented Type TDO hooks. Both types are RoHS compliant and offered in several sizes for installation in metal sheets as thin as 0.04 inches and thick as 0.125 inches.
