

EMI/RFI Filters

This standard range of EMC filters is specially designed and optimized for inverter applications, such as servos and motor drives. The R105 series filters are compact, lightweight, and offer significant attenuation of the most critical frequencies for inverter applications. The company designs and produces standard and custom EMC filters for practically all power electronics applications. From board level solutions to high power filters, it designs, builds, and tests filters to meet exact customer needs for 1-phase, 3-phase, or DC applications with current ratings up to 2,500 A, voltage to 760 V, and system frequency up to 400 Hz.
