

Encoder (4675)

The R35i is provided with an industry standard 1.812 inches mounting pattern in addition to the existing 1.28 inches mounting. This feature allows for compatibility with larger encoders such as the company's R50i, and also includes additional strain relief features for securing the cable. The R35i maintains its user friendly mounting tolerances with either configuration, allowing up to ۪.01 inches of shaft axial motion.
