

High Purity PTFE

Texolon brand high purity PTFE is a product line particularly important in applications where material cleanliness is essential. The high purity PTFE material is molded, packaged, and labeled in a strictly controlled environment, ensuring the highest purity for demanding applications. High purity PTFE is preferred over standard PTFE in medical equipment components such as bellows, diaphragms, valves, fittings, and a host of other parts due to its exceptionally clean, contaminate-free characteristics. This material provides the purity, wear resistance, and corrosion resistance demanded in imaging, laboratory, therapy, surgical, and other critical medical applications. **Plastomer Technologies** 800-345-4901 www.plastomertech.comHigh purity PTFE
