

## Metering Pump

Featuring a high torque, three-phase drive, and a three-digit LED display control module, the IVSP (industrial variable speed pump) is ideal for handling a broad range of fluid viscosities. The complete system consists of a high torque variable speed drive, integrally mounted valveless pump head, and controller. The controller is a space-saving, DIN design. Motor speed can be adjusted either manually with the front panel membrane switches or electronically using a 0-20 mA, 4-20 mA, or 0-10 VDC input signals.
