

Ink-Jet Printing System

The LC-16 industrial ink-jet printing system is designed to mark a variety of challenging substrates including pipes, bags, insulation sleeves, fabrics, and extruded packing. The LC-16 system is also designed to perform effectively in harsh conditions and is highly resistant to dust, humidity, vibrations, large variations in temperature, and aggressive substances. Using the electromagnetic drop-on-demand technology, the LC-16 has a performance record of overcoming a variety of obstacles in industrial and packaging coding applications.
