

Leak and Seal Strength Package Test System

The feature-rich Lippke 4000 Series is designed to perform a variety of leak and seal strength tests on flexible, rigid, and porous materials. The Model 4000 is standalone and the Model 4500 is a PC-operated, bench-top unit. These units are the next generation in a line of positive pressure medical device packaging test systems designed to measure the strength of the package's seals and material while simultaneously assessing the package's ability to seal its contents against atmospheric contamination. The 4000 Series provides precise, accurate, and reproducible test results consistent with ASTM Standards F2054, F1140, F2095, and ISO Standard 11607.
