

Wave Springs Minimize Assembly Cost

Metric Crest-to-Crest wave springs minimize assembly cost and total assembly size due to the reduced spring cavity required. The company offers over 3,000 standard wave springs in 17-7 stainless steel or carbon steel. The metric Crest-to Crest series is available in dimensions from 6 to 60 mm. A wealth of information about the new wave springs has been added to the company's website, including an application checklist to make ordering fast and accurate.
