

Filters, Regulators, and Filter/Regulators Are Compact

The FR Series of compact, lightweight air filters, regulators, and filter/regulators are compact, and feature a diaphragm for good regulating performance and an engineered polymer body that conforms to non-grease specifications. They are easy to install, with either the special supplied mounting bracket or bolt mounting holes on the front of the body, and they can be used as non-ion specification products (excluding pressure gauge). The FN 100 air filter can be used for both pressure and vacuum applications. The VFN 100 air filter is designed for both vacuum and vacuum breaking applications, and is installed just before vacuum pads or other components. Both units filter to five microns.
