

Measuring System Offers Fast, Accurate Dimensional Analysis

The OneTouch is an optical measuring system that offers very fast and accurate dimensional analysis. Perform micron level accuracy on just a few features or highly complex piece parts with the touch of a button. The speed, accuracy, and capability of this field of view measuring device automates the measuring process and eliminates the need for traditional gaging. No need for keyboard or mouse once a measuring program is created with the company's software. Create part programs using intuitive programming tools provided. Operators with minimal computer experience can become proficient at producing part programs within a few hours of use.
