

# CAD Software Adds Visual Compare, Other Search Features

Company has announced the release of a new update of its multi-CAD viewing, translation, and productivity software. This software provides a wide range of new features, including the ability to view two models superimposed on top of each with the differences highlighted. The new compare parts functionality makes it possible for users to easily identify the differences between any two models. This function can be used in situations such as comparing a first article submitted by a vendor to the original design intent. Other additions include the ability to search for features based on parameter values, measurement of geometric dimensions, and updated location techniques within complex assembly.
