

High Power Density Power Supply With Medical Approvals

Company has announced the release of AC/DC power supplies, which offer a performance packed design and compliance to worldwide medical safety standards. The series features a power factor corrected universal input and single, dual, and triple output models with versatile attributes of floating and adjustable output voltages. Either U-bracket or enclosed mechanical configurations are packaged in a 10.5" 5" × 2.5" size. Supplies have both line and neutral fused in order to comply with European safety requirements. They also feature comprehensive protection circuitry including overvoltage, short circuit, and thermal protection. Optional integral cover and fan allow for a full 650 W of power from 0-50 C, with derated output power up to 70 C.
