

Pre-Aseptic Room Disinfectant Eliminates Bio-Contaminate

This system employs pulsed UV light to achieve bio-reduction and the surface sanitation of boxes, bags, and carts prior to entering an aseptic room. The system is designed to eliminate any bio-contaminate from packages entering an aseptic room, instantly and safely, without heat or chemicals. Featuring pulsed UV light technology to disinfect the packages, the system is capable of 4 log kill in less than one second, making it ideal for high-speed, in-line conveyor systems.
