

Circuit Protector Offers Versatility, Extended Current Ratings

The UMT 250 series has added new current ratings from 80 mA to 10 A. The series is designed to provide overcurrent and short-circuit protection in both primary and secondary circuits. The versatile one-package solution streamlines design, procurement, and automated assembly processes. The series maximizes circuit protection, while its compact size meets the demand for saving space and facilitating production. It can be mounted on both sides of the printed circuit board, and its low profile increases production rates when mounted with pick and place assembly machines.
