

Compact Power Line Filters Feature Slide-In Mounting

The CORCOM SRB series of power line filters has been enhanced to include slide-in versions for quick, easy mounting in panel openings. The slide-in mounting approach provides a simple, cost-effective installation method, reducing the need for additional mounting hardware. Retention can be along either the long edge or the short edge of the filter. The shielded filters provide one of the shortest depths available. The modules are rated up to 15 A at 250 VAC, 50/60 Hz. They are UL recognized, CSA certified, and VDE approved. Load termination is provided using wire leads to keep the mounting depth to a minimum.
