

Flex DC High Performance Controller

The Flex DC combines a high performance motion controller with one or two axes of company drivers. The Flex DC is suitable to all applications and is supported with an easy-to-use GUI for machine set up and tuning. The 8 kHz control is seamlessly integrated to any FB series linear or rotary stage and is provided in a stand alone package or with a rack mounting kit. The optional sin/cosine encoder input allows for high resolution motion control in a simple package.
