

High Rate Lithium Ion Cell Lighter With More Power

The CGR26650A is a high rate lithium ion cell. The cell's nickel manganese-based cathode material delivers higher discharge rates and better temperature stability than comparative cells, while the company's exclusive heat-resistance layer technology provides safer operation. Specific features include high discharge rate capability (up to 40 Amps), 2650 mAh typical capacity, high recharge rate capacity (most capacity recovered within 20 minutes), wide operating temperature range, and excellent cycle life.
