

# Flexible Tubing Handles Temperature Fluctuations

Designed to endure temperature extremes, medical-grade silicone tubing handles temperature variations from -100°F to 400°F; braid-reinforced hose from -80°F to 350°F. Both offer translucency for visual contact with the flow and excellent bend radii for restricted space applications. Their non-toxic ingredients meet FDA, NSF-51, and USP Class VI requirements. Platinum-cured versions of silicone tubing and reinforced suction hose are also available.
