

# Modular Video-Based System Enables Precision Inspection

The Galileo KineMic, an entry level modular video-based inspection system, is well-suited for quality assurance, receiving inspection, training, manufacturing, assembly, research, documentation, and a variety of other applications. It includes a 6-1 magnification range with a programmable magnification range from 2x and 0.5x zoom with auxiliary lenses, and a microscope stand with coarse-fine focus control. For superior lighting, LED illumination is provided with a wired remote dimmer control. Transmitted illumination with a dual output illuminator is also available.
