

Programmable Force Tester Features PC Control

The Model ESM301 force tester is designed for product integrity testing in quality control, manufacturing, and R&D areas. With a load capacity of 300 lbf (1.5 kN), the ESM301 is ideal for a range of testing applications, including spring testing, peel testing, tensile testing, wire pull testing, and many other applications. The tester may be programmed and controlled via its front panel or via PC. Unique “build-your-own” configurability allows the user to purchase individual features at time of order, or through a simple activation procedure in the field. PC control enables the user to control the ESM301 through a custom program or through Nexygen TCD control software.
