

Fully Shrouded Headers Help Eliminate Mismatching

Fully shrouded post headers, available in two through 12 positions, have been added to the popular Economy Power (EP) connector family. Intended for secondary power circuit applications, the through-hole headers have a current-carrying capacity of 7.5 A maximum per contact. To lessen the chance of mismatching, the full four-sided shrouding aids proper alignment during engagement of the plug connector. The headers are compatible with existing EP connectors.
