

Polymers Brochure

Victrex T-Series polymers offer a solution for applications requiring high temperature resistance; compressive, tensile, and flexural strength; and low fatigue properties. A technical brochure from Victrex highlights the key features of these proprietary blended products based on Victrex PEEK polymer and Celazole polybenzimidazole (PBI). To illustrate the products' mechanical performance vs. other polymers, the brochure includes a variety of charts and graphs comparing wear and strength properties up to 300°C. *Information:* www.victrex.com [1].
