

## Thin Filter Media Meets UL 94

This 0.12-inch-thick Quadrafoam is the thinnest media available that meets the UL 94 HF-1 rating. The media is soft and compressible and available in 45, 60, and 80 pores-per-inch (PPI). In addition to filtration applications, it can also be bonded to interior chassis walls for insulation or circuit card stabilization purposes. A design engineer looking to evaluate the company's air filter solutions can access its complimentary, round-the-clock prototype service available worldwide via the website. The prototype service provides design engineers with assistance in meeting critical design, testing, and evaluation deadlines for air filter media.
