

Motion Controller Provides High Sampling Rate of 20 kh on all Axes

This cost-efficient, stand-alone motion controller provides multi-axis control for simple and demanding applications. Designated SPiiPlus-LF, the small form factor, four axes motion controller features off-board extensions to provide up to 64 axes of control using a CANopen network. The SPiiPlus-LF is PLCopen compliant and, in addition to the ACSPL+ motion programming language, it can also be programmed in any of the five IEC61131-3 standard PLC languages. The SPiiPlus-LF provides fast, accurate motion using a high sampling rate of 20kHz on all axes.
