

Industrial Vacuum Exceeds Performance of Mops, Brooms, and Inefficient Vacuums

The Nilfisk CFM 127 is an industrial vacuum that exceeds performance of mops, brooms, and inefficient vacuums; is an excellent and affordable alternative to these archaic methods of general cleaning. The unit is a compact, intermittent-duty vacuum, designed with all the features of larger models. It is ideal for general cleaning and collection and containment of fine powders and toxic debris in specialized applications. The large main filter provides more surface area for filtering and resists premature clogging. Optional upstream HEPA filter also available, providing 99.97% efficiency, down to and including 0.3 μm .
