Thermal Solution Enables Flexibility in Transport Packaging

Designed to provide the most scalable thermal packaging option on the market, the Credo Cube was conceived in response to industry demand for greater flexibility in transport packaging. With customizable wall dimensions, the Credo Cube is uniquely suited to the varying packaging designs of the pharmaceutical and related industries. Modular construction allows for a container perfectly sized for its contents, thus saving on both shipping costs and packing time. Like other examples of the company's products, the Credo Cube utilizes a unique Thermal Isolation Chamber that fully surrounds the payload, offering greater temperature performance and overall payload protection. The latest generation in the Credo line is an enhancement made possible via six interchangeable walls, providing excellent performance and flexibility.
