

Guide Details Properties, Latest Innovations in Thermoplastic Resins

The Thermoplastic Resins Properties Guide features detailed information about Makrolon polycarbonates; Apec high-heat polycarbonates; Bayblend polycarbonate/ABS blends; Makroblend polycarbonate/polyester blends; and Texin, Desmopan, and Utechllan thermoplastic polyurethanes. The resins' main application areas, characteristics, and grade classes, as well as specific examples of products incorporating the resins, are also highlighted. The guide lists standard grades, as well as new grades that were developed to enhance properties such as light transmittance, flame resistance, and weatherability. *Information:* www.bayermaterialsciencenafta.com [1].
