

# Modular Cleanroom Walls Provide Fast Installation

Clean Air Products introduces Series 901 modular cleanroom walls. They are available in three standard designs, with custom sizes and shapes to suit various application needs. They provide a versatile modular wall system designed for high-quality cleanroom performance with fast and easy bolt-together installation. Series 901 cleanroom walls are cleanroom and pharmacy compatible. The standard wall panel is constructed of white, 18 gauge steel. It is laminated with textured vinyl on one side and smooth vinyl on the opposite. The panels may be formed with either a smooth or textured finish to the room side. They are also available with an unpainted stainless steel finish, smooth or textured baked enamel, epoxy or conductive finishes. Colors are available in addition to the standard white. The construction incorporates bolt fasteners for connecting the panels.
