

# **Silicone Tape Creates Air-Tight, Water-Tight Bond**

The military-grade, multi-purpose silicone tape (MIL-I-46852C) creates a reliable air-tight, water-tight bond within three minutes of application. Once the product has cured, the protected area withstands exposure to solvents, UV rays, and temperatures ranging from -49°F to 480°F. The versatile non-gummy tape is applied by spiral wrapping virtually any shape wire, tube, or electrical component. Available in five thicknesses, two widths, and either rectangular or delta shapes to accommodate most application requirements.
