

Machining Services Include Polymer Tube Cutting

avicenna22600006072Machining services include polymer tube cuttingNPR
The company's mechanical machining services include polymer tube cutting, which offers a high-volume solution for medical device manufacturers seeking to transform raw material to custom components. Applications range from catheter assembly components and marker bands to strain relief jackets and spacers. Raw materials can be in the form of either stick pieces or bulk spool. The particular materials cut include heat-shrink, urethanes, polyimide, and silicone.
