

Recyclable TPEs Are FDA-Compliant

gls37800001416Recyclable TPEs are FDA-compliantNPR

The Versaflex HC portfolio, engineered for medical tubing, gaskets, stoppers, sheet extrusion, and blow molding applications, has been developed and tested for compliance with USP Class VI, ISO 10993-4, and ISO 10993-5. The FDA-compliant series TPEs provide customers with new choices for low-extractable, eco-conscious medical tubing. Formulated without phthalates or halogens, these materials can help medical tubing manufacturers to address regulatory and marketplace concerns without compromising end-use performance.
