

New Silicone Gel Tape & Chip Vibration Isolators

Advanced Antivibration Components (AAC)'s Silicone Gel Tape & Chip Vibration Isolators, identified as the V10Z62MGT and V20Z62MGC Series, are designed for light to medium loads. The gel tape is stocked in 1000 mm lengths and in 3 thicknesses: 1 mm, 2 mm and 3 mm. Each of the 3 thicknesses is available in 2 widths: 10 mm, and 20 mm. The chip isolators are priced per sheet of 25 chips. The chips come in thicknesses ranging from 3 mm to 10 mm. Three sheet sizes are available: 10 mm x 10 mm, 15 mm x 15 mm, and 20 mm x 20 mm. They are able to operate effectively over a temperature range of from -40° C to +100° C (-40° F to 212° F). They offer excellent chemical and weather resistance and are low in compression set and are suitable for use in narrow space applications. Performance remains the same even after repeated use. The environment-friendly isolators feature low resonance magnification and are stable with minimal horizontal deflection.
