

# Judson Smith Showcases Tubular Parts Fabrication Capabilities

Judson Smith, a subsidiary of ATW Companies (MD&M West Booth 1828), whose tube components and assemblies are widely used in instruments designed for minimally invasive surgical procedures, is showcasing its tubular parts fabrication capabilities. The company excels in thin wall, tight tolerances, tube bending, specialty tube fabrication, and end forming. Judson Smith is well known in the medical device industry for rapid prototyping, engineering design assistance, and long run production expertise. The company is also providing a close look at its laser cutting and welding capabilities, which use pulse technology that results in a clean and uniform weld path. In addition, Judson Smith is featuring its highly specialized CNC machining capabilities used in orthopedic screws, spacers, lumbar systems, drill guides, awls, distracters, and more.
