

Enhanced Enclosures Act as Shielding and Mounting Kit in One

Elma Electronic Inc, a global manufacturer of electronic packaging products, offers an enhanced version of its Type 32 enclosure with advanced shielding.

The Type 32 Enhanced has gasket “spoons” stamped into the aluminum along the frame to provide EMC shielding. The covers are folded in an attractive, rounded design that also helps contain EMI. The unique design of the extrusions allows PCB or other component mounting directly. By combining shielding and mounting into the enclosure frame, the customer saves assembly process steps and significant time.

The Type 32 line of cases comes in 2U-4U heights standard with various widths and depths. Customization is available. Other features include stylized rubber “feet” for desktop applications, optional carry handles, and other accessories. The aesthetic bezel conceals the front assembly screws for an attractive finish.
